New 01/19

For Research Use Only. Not For Use In Diagnostic Procedures.

Background: This product is a concentrated buffer suitable for antibody incubation and wash steps, and is designed for use with components of the FoxP3/Transcription Factor Fixation/Permeabilization Kit #43481. This reagent enables antibody access to intracellular targets and is compatible with fluorescent detection by flow cytometry.

Note: Precipitation may occur. The presence of precipitate does not affect the performance of the reagent.

Storage: Store at 4°C. Stable for 6 months when stored at 4°C.

Directions for Use: Dilute desired amount to a 1X working solution with reverse osmosis deionized (RODI) or equivalent grade water. Use for all wash steps and antibody incubation following fixation as described in the FoxP3/Transcription Factor Fixation/Permeabilization Kit #43481 protocol.

For product specific protocols and a complete listing of recommended companion products please see the product web page at www.cellsignal.com.
